

SystemChecker

SpectraPro and XTREND can run properly under the following operating systems:

Operating system	Version number
Windows 8	6.2
Windows 7	6.1
Windows Server 2008 R2	6.1
Windows Server 2008	6.0
Windows Vista	6.0
Windows Server 2003 R2	5.2
Windows Server 2003	5.2
Windows XP 64-Bit Edition	5.2
Windows XP	5.1
Windows 2000	5.0

Some time, during applications installation, some additional files required by these applications are not installed. This is happened when the user do not have full administrator privilege during installation process or from others unknown reason.

In such situation install in your computer also the *SystemCheckerr* application.

Installing this application, the files needed for SpectraPro and XTREND application will be installed or updated properly.

The files installed are virus checked and are in accordance with the Microsoft recommendation.

If you need more detail please read the following article:
Description of the cumulative update rollup for the Visual Basic 6.0 Service Pack 6 Runtime Extended Files on address:

<http://support.microsoft.com/kb/957924>

Below is presented a full list with file needed:
(All the files must exist in Windows System folder
(WINDOWS\system32))

No	File name	Version	Size	Date	Time
----	-----------	---------	------	------	------

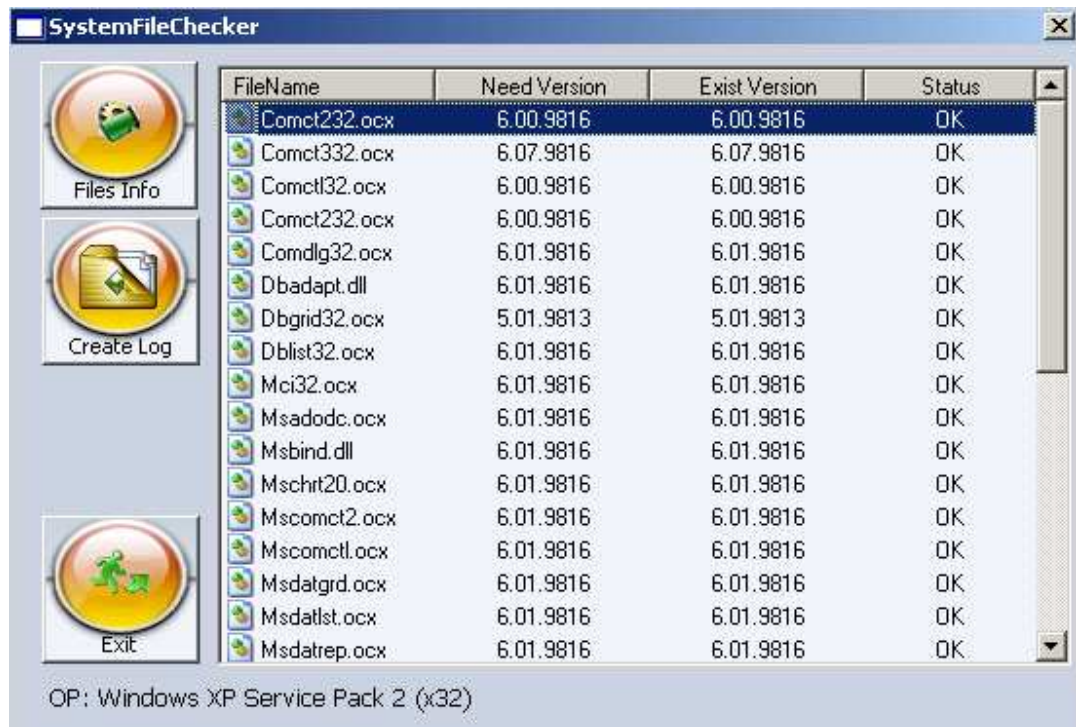

1	Comct232.ocx.	6.0.98.16	170080	3/24/2009	15:52

After installing, run the *SystemCheckerr* application to detect if the files are properly installed.

The application can create also a log file, with information regarding your computer. If you have some trouble, create the log file and send to VMI AB for investigations.

The log file is a simple text file and can be opened before sending to be sure that no any confidential information from your computer is included in this file.

When this application is opened, the following window will appear:

In the column *Status* you can find the file system status.
The application will change the icons of the missing or wrong files as follow:

File has wrong version or is older then required.

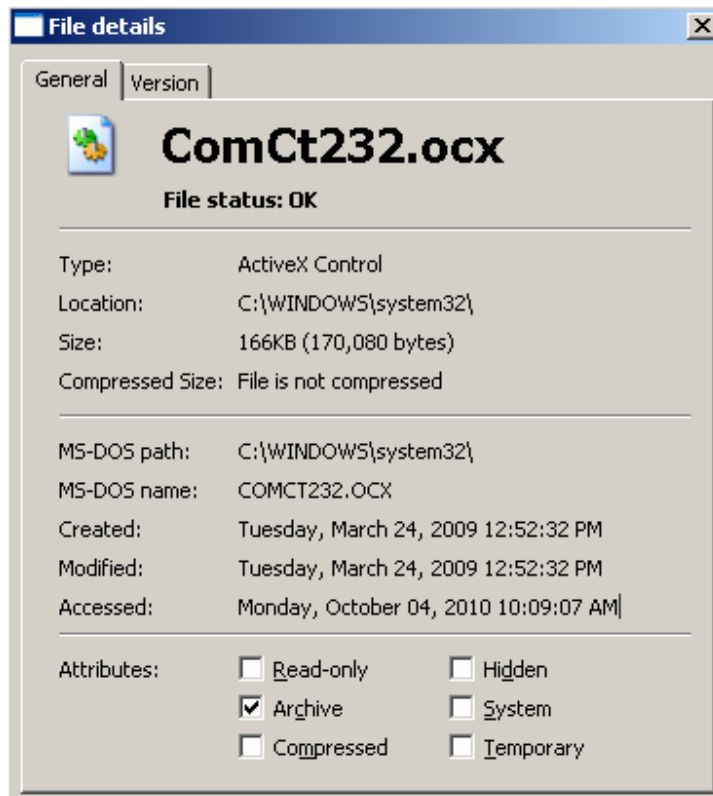

File missing.

If you need more details regarding any system file, just press *Files Info* button:

The following windows will appear:

Once above windows are opened, just select from the list any file and the *Files details* windows will be refreshed.

The application will create a text file containing information regarding the files status and will contain also some non-confidential information regarding your Operating system.

Press *Create Log* button and a log file will be created.

Send this file to VMI for investigation.

IF STILL YOU HAVE PROBLEMS.

If you still have problems running SpectraPro or/and XTREND on VISTA or Windows7 operating system, configure your Operating System using the Compatibility Mode.

Program compatibility is a mode in Windows 7 that lets you run some programs written for earlier versions of Windows. Many

programs written for Windows XP will also work in Windows 7, but some older programs might run poorly or not at all. If an older program doesn't run correctly, you can use the Program Compatibility Troubleshooter to simulate earlier versions of Windows, which may address the issue.

To run the Program Compatibility Troubleshooter:

- Click **Start** , click **Control Panel**, click **Programs**, and then click **Run programs made for previous versions of Windows**.
- Follow the instructions in the troubleshooter.

For more details visit:

<http://windows.microsoft.com/en-US/windows7/Make-older-programs-run-in-this-version-of-Windows>
