XTrend SP15 for Vista

Installing XViber USB Drivers

1. Installing Driver under Windows XP

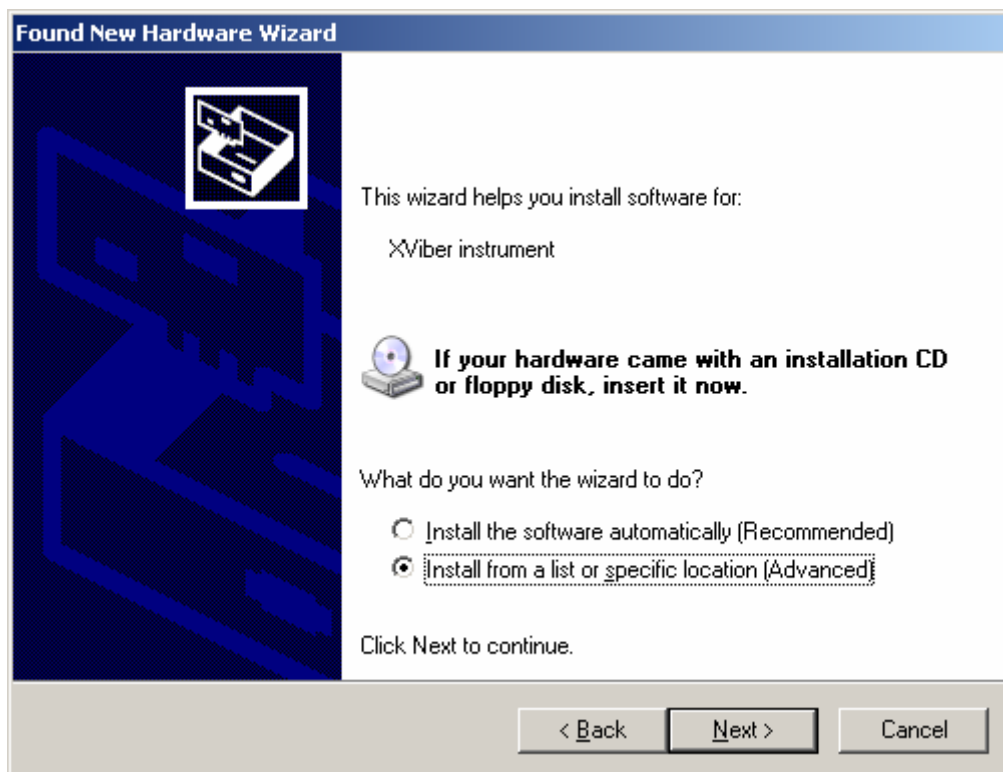

If you are running Windows XP or Windows XP SP 1, temporarily disconnect your PC from the Internet. This can be done by either removing the network cable from your PC or by disabling your network card by going to the "Control Panel\Network and Dial-Up Connections", rightclicking on the appropriate connection and selecting "Disable" from the menu. The connection can be re-enabled after the installation is complete. This is not necessary under Windows XP SP 2 if configured to ask before connecting to Windows Update. Windows XP SP 2 can have the settings for Windows Update changed through "Control Panel\System" then select the "Hardware" tab and click "Windows Update".

Connect the XViber Instrument to a spare USB port on your PC and Windows Found New Hardware Wizard will launch.

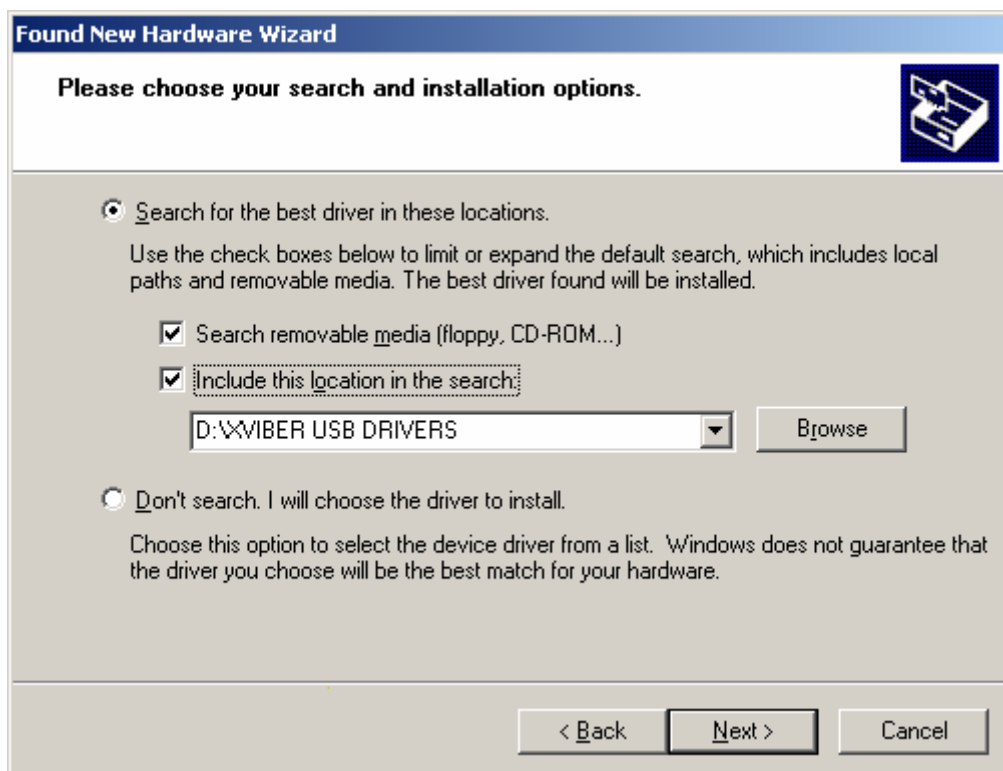

If there is no available Internet connection or Windows XP SP 2 is configured to ask before connecting to Windows Update, the screen below is shown. Select "No, not this time" from the options available and then click "Next" to proceed with the installation.

Select "Install from a list or specific location (Advanced)" as shown below and then click "Next".

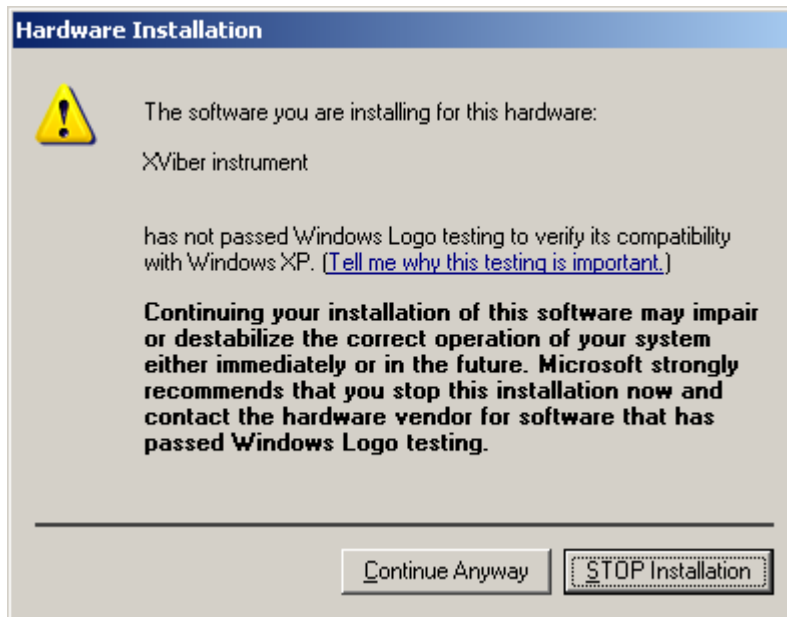

Select "Search for the best driver in these locations" and enter the file path in the combo-box ("D:\XVIBER USB DRIVERS" in the example below) or browse to it by clicking the browse button. Once the file path has been entered in the box, click next to proceed.

If Windows XP is configured to warn when unsigned (non-WHQL certified) drivers are about to

be installed, the following screen will be displayed. Click on "Continue Anyway" to continue with the installation. If Windows XP is configured to ignore file signature warnings, no message will appear.

After the installation is completed, the following window will be shown:

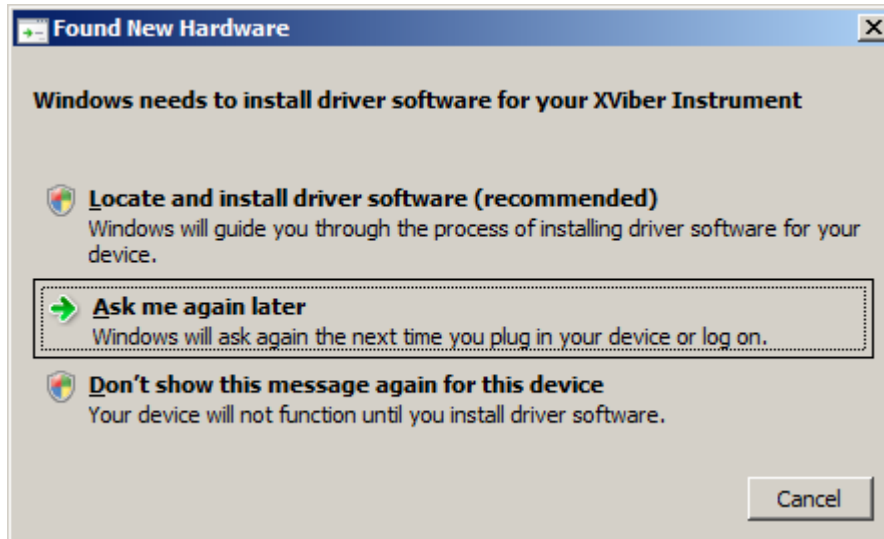

Now, the Windows will install also the drivers for USB Serial Port (these drivers are not required for XTrend application, but will be used in the future).

Again the Windows Found New Hardware Wizard will launch.
Repeat the steps above to complete the installation.

2. Installing Driver under Windows Vista

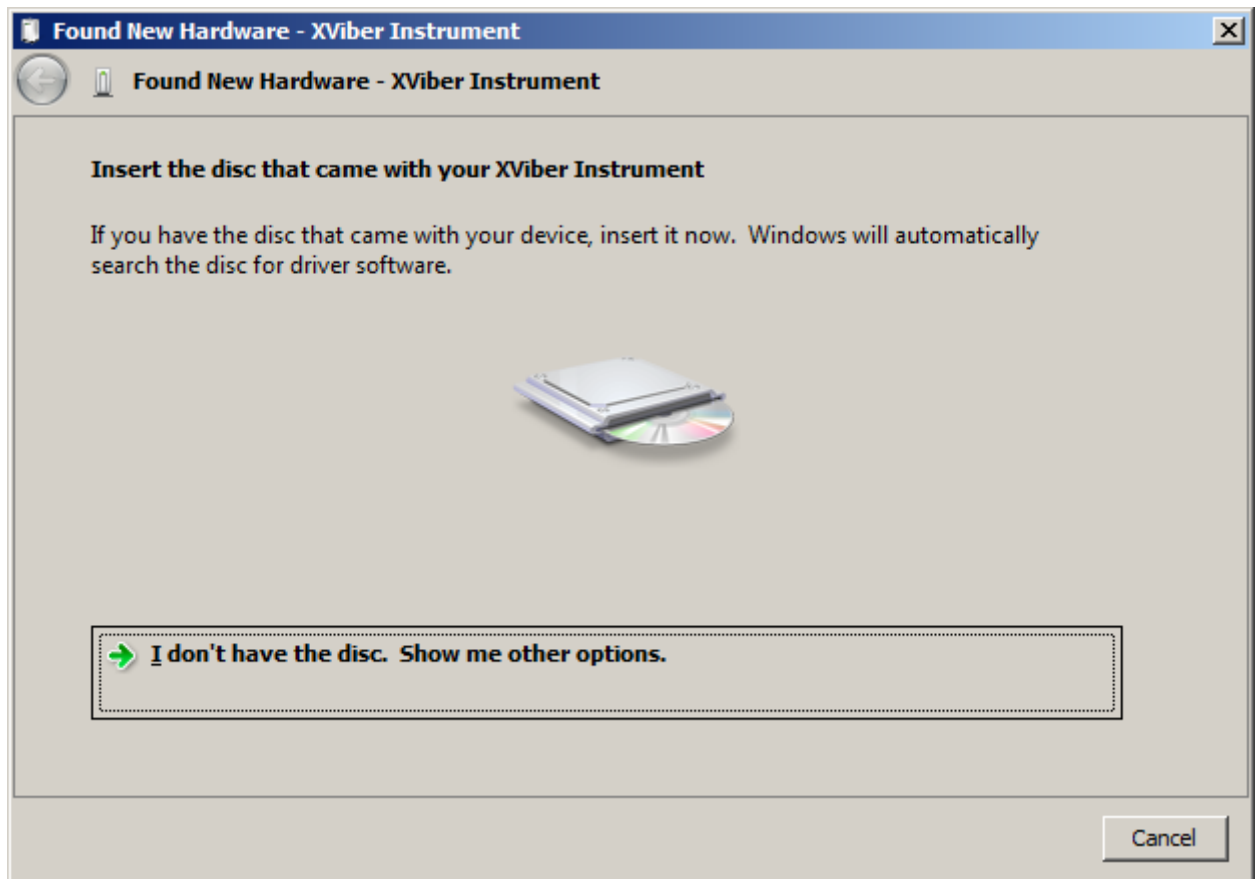

Temporarily disconnect your PC from the Internet. This can be done by either removing the network cable from your PC or by disabling your network card by going to the "Control Panel\Network and Dial-Up Connections", rightclicking on the appropriate connection and selecting "Disable" from the menu. The connection can be re-enabled after the installation is complete.

Connect the XViber Instrument to a spare USB port on your PC and Windows Found New Hardware Wizard will launch.

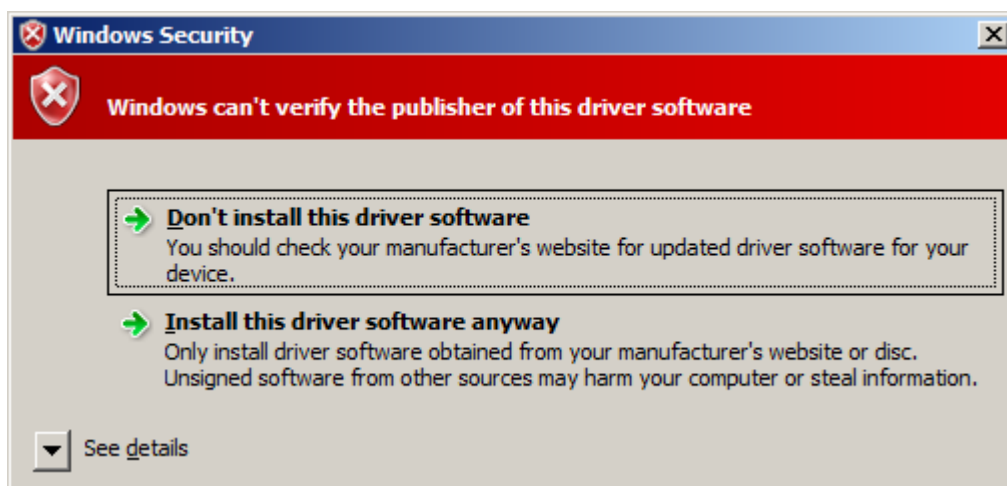

Select Locate and install driver software for your Xviber Instrument.

Just insert the XTrend Installation CD in a CD Drive.

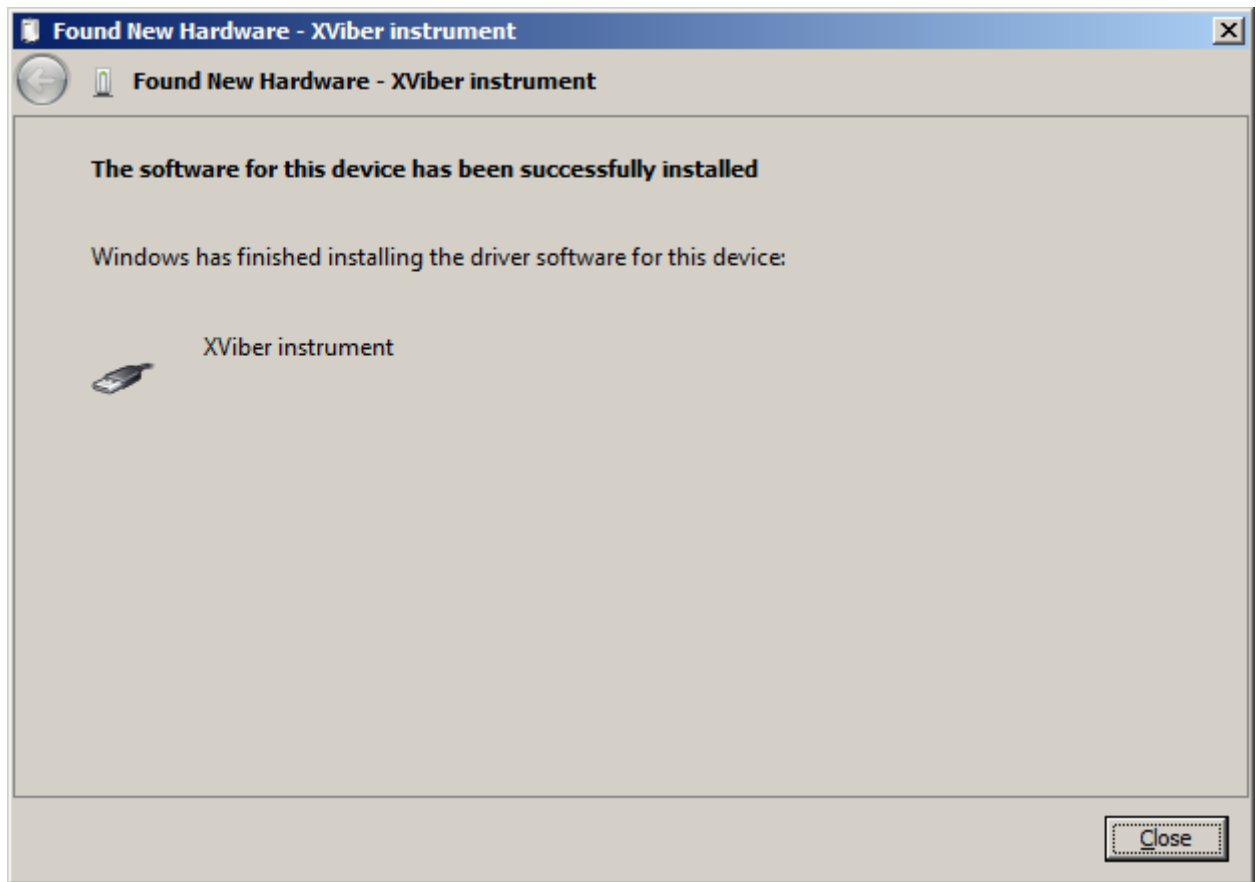

After some time, the installation procedure will begin.

If Windows Vista is configured to warn when unsigned (non-WHQL certified) drivers are about to be installed, the following screen will be displayed. Click on "Install this driver software anyway" to continue with the installation. If Windows Vista is configured to ignore file signature warnings, no message will appear

The drivers will be found and the Installation procedure will continue.

Now, the Windows will install also the drivers for USB Serial Port (these drivers are not required for XTrend application, but will be used in the future).

Again the Windows Found New Hardware Wizard will launch.
Repeat the steps above to complete the installation.
